PART VII.

EQUIPMENT AND APPLIANCES USED IN THE OPERATION OF INTERURBAN TRAMWAYS, WITH RULES GOVERNING OPERATION.

1. The term “ Inspector,” wherever used in these rules, shall mean an Inspector of the Department of Railways; “ Department ” shall mean Department of Railways; and “ company ” shall mean a company operating tramways, or interurban or street railway.

2. Every company shall provide and cause to be used on all trains and cars modern and efficient apparatus, appliances, and means:—

(a.) To provide immediate communication between the conductor while in any car of any passenger-train and the engineer or motorman:

(b.) To check at will the speed of the train, and bring the same safely to a standstill as expeditiously as possible, and, except under circumstances of sudden danger or emergency, without causing undue discomfort to passengers (if any) on the train:

(c.) To securely couple and connect the cars composing the train with couplers which couple automatically by impact, and which can be uncoupled without the necessity of men going in between the ends of the cars.

3. Such apparatus, appliances, and means for the checking of speed or the stopping of any train or car shall include a power drive-wheel brake and appliances for operating the train-brake system upon the locomotive, motor, or car.

4. There shall also be such a number of cars in every train equipped with power- or train-brakes that the engineer or motorman on the locomotive drawing such train can control its speed, or bring the train to a stop in the quickest and best manner possible, without requiring the brakemen to use the common hand-brake for that purpose.

5. Upon all trains and cars carrying passengers such system of brakes shall be continuous, instantaneous in action, and capable of being applied at will by the engineer, motorman, or any trainman, and the brakes must be self-applying in the event of any failure in the continuity of their action.

6. All box freight-cars of the company shall, for the security of railway employees, be equipped with:—

(a.) Outside ladders, on two of the diagonally opposite ends and sides of each car projecting below the frame of the car, with one step or rung of each ladder below the frame, the ladders being placed close to the ends and sides to which they are attached; and

(b.) Hand-grips placed anglewise over the ladders of each box car and so arranged as to assist persons in climbing on the roof by means of the ladders: Provided that, if there is at any time any other improved side attachment which, in the opinion of the Minister, is better calculated to promote the safety of the train-hands, the Minister may, by certificate under his hand and seal of office, require all cars to be fitted with the said improved attachment.

7. All freight-cars shall be constructed and equipped in accordance with the rules of the Association of American Railroads.

8. All cabooses shall be equipped with a gauge connected to the air-brake train-pipe. The gauge shall be placed in cupola, and also shall be equipped with an emergency discharge-valve. Each caboose to be equipped with an efficient hand-brake on both ends of car, and each hand-brake to work in harmony with the power-brake thereon.

9. All boarding and outfit cars shall be equipped with an emergency valve connected to air-brake train-pipe. The cord shall be attached to the handle of the emergency discharge-valve, and shall run full length of car.

10. (1.) Every locomotive shall be equipped with a bell of at least 30 lb. weight; also with a foot-gong and with a whistle; also be equipped with a step or steps and hand-holds on both sides and ends.

(2.) Foot-rests shall be provided on the pilots of every such locomotive sufficiently wide for a man to stand on. Every switching or yard locomotive shall be equipped with foot-boards to be not less than 10 inches wide and in height from top of rail to top of tread not more than 12 nor less than 9 inches. Every engine, train, or electric car shall, before it crosses over any railway-track at rail-level be brought to a full stop: Provided that whenever there is in use at any such crossing an interlocking switch and signal system or other device which, in the opinion of the Minister, renders it safe to permit engines and trains of electric cars to pass over such crossing without being brought to a stop, the Minister may, by certificate under his hand and seal of office, permit such engines and trains and cars to pass over such crossing without stopping, under such regulations as to speed and other matters as the Minister deems proper.

20. Whenever any railway crosses any highway at rail-level, the company shall not, nor shall its officers, agents, or employees, wilfully permit any engine, tender, or car or any portion thereof to stand on any part of such highway for a longer period than five minutes at one time, or, in shunting, to obstruct public traffic for a longer period than five minutes at one time, or, in the opinion of the Minister, unnecessarily interfere therewith.

terminal test of the air-brakes shall be made, and where cars are found defective they shall be set out and repairs made before they are allowed to proceed. When for any reason the train has parted between air-cars or air-hose has been uncoupled the following test to be made: After all couplings have again been united brakes must be applied and released by the motorman's or engineer's brake-valve, and trainman must see that the brakes on the car immediately behind the point of separation and on the last two cars are operating properly.

28. The letters "A" and "B" shall be stencilled in the vestibule of cars. The end towards which the cylinder push-rod travels shall be known as "B" end, and the opposite end as "A" end.
